

API Reference

Harmony API

API Version: 2.0

Documentation for Harmony API.

Harmony is a tool using AI which allows you to compare items from questionnaires and identify similar content. You can try Harmony at app.harmonydata.org and you can read our blog at harmonydata.org/blog/.

RESPONSE

STATUS CODE - 200: Successful Response

RESPONSE MODEL - application/json

undefined

3. TEXT

3.1 POST /text/parse

Parse Instruments

Parse PDFs or Exceles or text files into Instruments, and identifies the language.

If the file is binary (Excel or PDF), you must supply each file with the content in MIME format and the bytes in base64 encoding, like the example RawFile in the schema.

If the file is plain text, supply the file content as a standard string.

REQUEST

REQUEST BODY - application/json

```
[{  
  Array of object:  
  file_id      string      Unique identifier for the file (UUID-4)  
  file_name    string      DEFAULT:Untitled file  
  file_type*   enum        The name of the input file  
  file_type*   enum        ALLOWED:pdf, xlsx, txt, docx  
  file_type*   enum        The file type (pdf, xlsx, txt)  
  content*     string      The raw file contents  
  text_content string      The plain text content  
  tables       [undefined]  
}]
```

RESPONSE

STATUS CODE - 200: Successful Response
